EDUCATION

IEC College of Engineering & Technology, Greater Noida

B.Tech, Computer Science & Engineering · 2022 · 2026

PROJECTS

Kalinga Craft Store · Founder and developer

Jun 2025 · Present · Ghaziabad
https://kalingastore.shop

- Shipped a live React storefront on Vercel for handmade crafts, with a Render API, Firebase, and Razorpay checkout.
- Run the shop myself: catalog, shipping rules, a 7-day return policy, and customer support on my own number.

Secure Insta Message · Python messaging core and tests

Mar 2025 · Present · Experimental, not a production app
https://github.com/niteeshkumar17/Secure_Insta_Message

- Built a Python messaging core and 11 pytest modules covering identity, X3DH, the double ratchet, sealed sender, onion routing, and security invariants.
- Wrote the threat model and the known limitations in the repo. A Flutter client embeds Tor and refuses to send until the local proxy is up.

CCTV to Google Drive · uploader on a camera I own

2026
https://github.com/niteeshkumar17/CCTVtoGDrive

- Added a small Go uploader on my own CP Plus camera (Ingenic T31L, Linux) so clips reach my Google Drive with no PC left running.
- Kept the stock phone app working. The uploader refreshes OAuth tokens, retries failed chunks, and stays inside the camera·s small memory budget.

Water-tank controller · firmware, board, and checks

2026
https://github.com/niteeshkumar17/Smart-Pumps

- Wrote the controller firmware, laid out a KiCad board, and added Python checks that read design-rule output and relay isolation.
- Built a Wokwi simulation with a small C sensor model so the control logic runs when the tank hardware is not on the bench.

AegisQuant · paper-only options trainer

Oct 2026 · Present
https://github.com/niteeshkumar17/MyAlgoTrade

- TypeScript app that paper-trades defined-risk debit spreads. Fills use live Angel One quotes. It does not send orders.
- Dashboard is on Vercel. A written checklist (sample size, drawdown, profit factor) has to pass before any live-order design.

SKILLS

- Languages: Python, TypeScript, JavaScript, Go, C, C++, Dart, SQL.
- Web: React, REST APIs, Firebase, Razorpay, Vercel, Git, GitHub Actions, Pytest.
- Hardware I own: ESP32, KiCad, UART bring-up, Wokwi. Also a Casio keypad mapper and ESP32 firmware at github.com/niteeshkumar17/esp.

Code for the projects above is public. I can walk through any of it in an interview.
